Keymacro is a full-featured interactive key macro, that lets you insert, edit, view and run macros, as well as convert macros to list of commands. KEYMACRO enables the user to create a list of commands, allowing for a macro (or set of macros) to be generated automatically and for each command to be run from the keyboard. Once the macro is set up, the user can

then choose to save and run the macro, or simply view and edit the macros. In addition to the user-defined macros, KEYMACRO can generate a set of default macro commands. These can be inserted from the keyboard, and the user can edit or delete them. KEYMACRO allows the user to generate macros for all the commands, including Insert, Delete, Bookmark, View, Save, Run Macro, and Run All macros. NOTE: If you want a better, more feature rich version of KEYMACRO that also supports all of the insert, delete, bookmark, view, save and run macros and has the ability to convert macros to a list of commands, you can download KEYMACRO Ultimate 1.0.
